

Simulate to Stimulate - NurseryLive! 2 Workshop

NurseryLive! 2. Immerse students in a virtual plant nursery and watch them grow.

Imagine immersing your students in a virtual nursery - a place where they can interact with physical world behaviours, share work related tasks, collaborate, plan and produce plant products to time and budget restraints at no added cost to your department.

Imagine, as the trainer, being able to customise real world parameters like climate, budget, production costs, pests, diseases, plant types and growing conditions to meet specific performance criteria.

Imagine being able to do all this with with base level 'point and click' computer skills.

Welcome to NurseryLive! 2. It achieves all that and more, plus it's free.
