

YOLA - Your Online Learning Assistant Just in time for learning

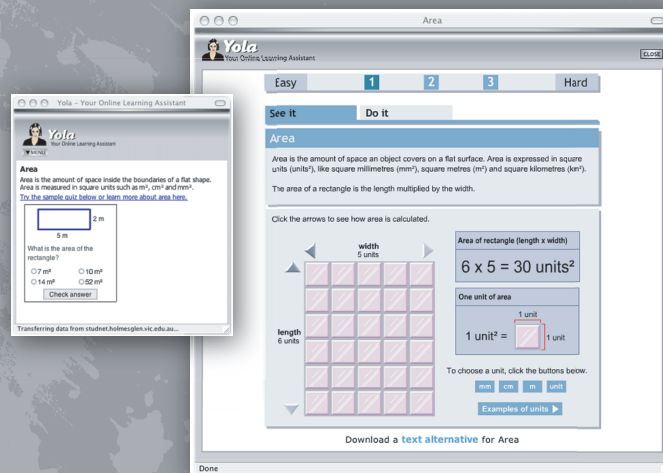

A workshop for trainers and teachers

Do you have students who have problems with numeracy that interfere with their ability to deal with what you are trying to teach them?

Many students have been 'turned off' maths by negative experiences in school classrooms. YOLA (Your Online Learning Assistant) offers engaging interactive numeracy support with some basic level maths concepts involving measuring, length, area, ratio, fractions, multiplications and division by 10's percentages, angles and conversions between metric units.

YOLA can be used as a standalone resource, or can be attached to an existing e-learning resource to offer support when and where it is needed.

YOLA is easy to use and it's **free**. Find out more in this two hour workshop.
